

# Heavy Equipment Step System Platform

A heavy equipment access platform enables a worker to access the operator's station safely. Heavy equipment such as bulldozers, excavators and skid steer loaders have awkward steps and ladders to climb. Workers with mobility impairments cannot climb on loaders, tracks and vertical steps. The heavy equipment access platform has sloped steps that are safe to climb. Once up the steps, the operator can simply walk across the platform and step onto the equipment. The heavy equipment access platform can then be lifted and moved wherever needed.
